The diagram shows the Electronic Load with various interfaces and electrical connections. On the top, there are communication ports: USB, RS-232, LAN, CAN, and GPIB (Option). On the right, there are Input + and Input - terminals. On the left, there are Sense + and Sense - terminals. At the bottom, there is an I/O port and GND/GNDA terminals. Electrical connections are shown with red arrows: Vin+PE (positive input voltage), Vmax (maximum voltage), Vin-PE (negative input voltage), VioPE (input voltage to PE), and Vin-io (input voltage to IO). A ground symbol is shown on the left side.

The specified accuracies refer to an ambient temperature of 23 ±5 °C. The specified accuracies are valid when the sense lines (if available) are connected and when the unit is connected to undisturbed voltages (ripple and noise < 0.1 %). At voltages with higher disturbance values the accuracy can change for the worse.
