The diagram shows the Electronic load with various input and sense lines. The main input is connected to Input + and Input -. The sense lines are Sense + and Sense -. The I/O port is connected to GND/GNDA. Voltage levels are indicated: Vmax for the input range, Vin+PE for the positive input voltage, Vin-PE for the negative input voltage, and Vin-io for the isolated input voltage.

The specified accuracies refer to an ambient temperature of 23 ±5 °C. The specified accuracies are valid when the sense lines are connected and when the unit is connected to undisturbed voltages (ripple and noise < 0.1 %). At voltages with higher disturbance values the accuracy can change for the worse.
